Guide to the composition of the control device	36

Signature of Style

Living Now is enhanced by new possibilities. High-quality finishes, flush-to-wall installation and intuitive smart functions transform the control device into a discreet, stylish feature that sits seamlessly within your home. A detail that makes walls more streamlined and the experience more natural.

Technology integrates effortlessly, simplifying everyday actions and making the home more comfortable, intelligent and personal.

LIVING
now

Clean lines and precise geometries define the design of Living Now: a compact and distinctive form, where proportions and details achieve an ideal balance.

The continuous, uninterrupted surface creates a monolithic effect: a single element that integrates cover plate and control devices into one.

Full touch

A wide, continuous control device: just press any point on the surface. The key always returns to its position and remains perfectly aligned, always ensuring a neat wall at all times. It is also customisable: icons, lights and colours, according to the preference of the user.

Floating frame

The floating, integrated in the cover plate, naturally adapts to any imperfections in the wall, ensuring a consistently flawless finish. Even in the presence of slight unevenness, the result remains harmonious and precise, enhanced by an elegant "floating" effect on the wall.

Essential monochromatism

White, sand and black: three iconic colours for a simple and reliable choice. They enhance any environment with an essential language, transforming the control device into a refined and clean detail. The result is a more harmonious and contemporary home with a consistent look in every room.

Absolute consistency

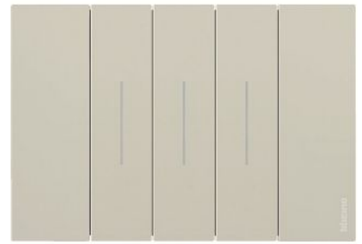

A neutral, universal palette, designed to harmonise with a range of materials and colours, from new builds to renovations. Each finish speaks the same colour language, creating continuity between surface, control device and space. The result is an elegant, cohesive aesthetic that enhances the environment without ever overwhelming it.

Sophisticated texture

Satin-finish surfaces with a soft-touch feel add depth and character to the control devices. The carefully calibrated visual and tactile experience conveys quality, refinement and a contemporary edge, turning every element into a premium architectural detail.

White

Sand

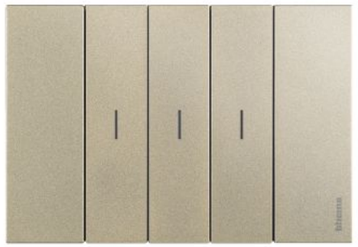

Black

Steel

Champagne

Bronze

Identity and prestige

Each finish defines a distinctive character, a sign of elegance conceived for projects with a unique and refined language. Calibrated reflections and iridescent depth create a visual and tactile sense of value, light and contemporaneity, making each control device a prestigious detail.

Authentic materials

Satin surfaces and pure textures reveal the true nature of the metal, celebrating the material in its most essential form and adding character to the architecture.

Metal monochromatism

The new metallic finishes express the strength of the material through authentic surfaces and natural finishes.

They capture light subtly and bring greater character to walls and furnishings, transforming every control device into a bold yet elegant detail. Three shades, three personalities - for a result that enhances any environment, even the most exclusive.

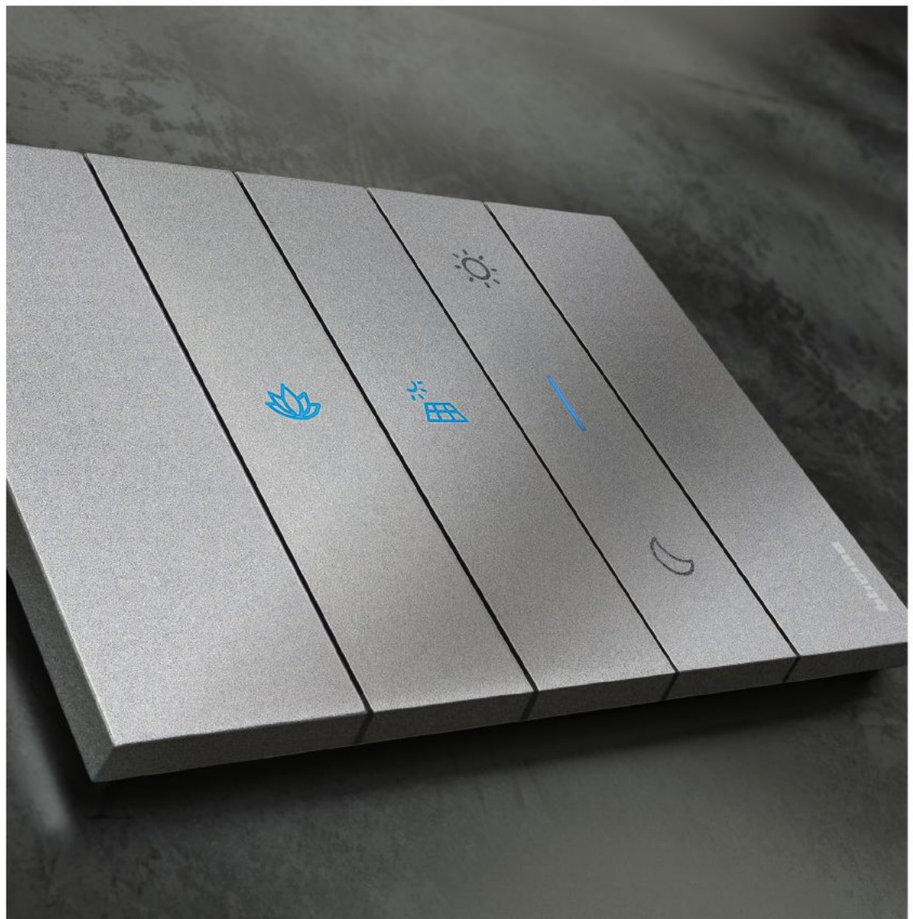

Customise every detail

A new level of customisation adds character to the control devices: fonts and symbols - which can also be tailored to the client's preferences or requirements - are engraved using laser technology, synonymous with precision and elegance.

The customisation service is available exclusively for the new metallic finishes.

Customisation

The home becomes more intuitive and immediate: every control is clear at first glance, without uncertainty. Thanks to personalised symbols and text, operation is simple for everyone, including guests. Backlighting guides night interaction, making it easy to identify the correct control device and check the status of the functions. A clear, easy to read system, always under control: "Bathroom light", "Living room curtain", "Children's night mode".

Working with your installer allows you to define functions and controls for each control device and preview the result. The system then takes shape precisely, with all necessary components, and every installed detail reflects your exact choice.

InWALL

The cover plate and control devices integrate seamlessly with the wall, without protrusions, creating a refined, minimalist effect.

A contemporary minimalism where technology becomes part of the living space and experience.

DESIGN AWARD 2026

Essential design that enhances the space.

Integration goes beyond the control devices: with InWALL solutions, even technical elements, such as junction boxes, disappear into the wall. The entire electric system becomes part of the architecture, eliminating bulk and thickness, and delivering clean, continuous surfaces. The result is a more coherent design in which every detail contributes to the overall harmony of the rooms.

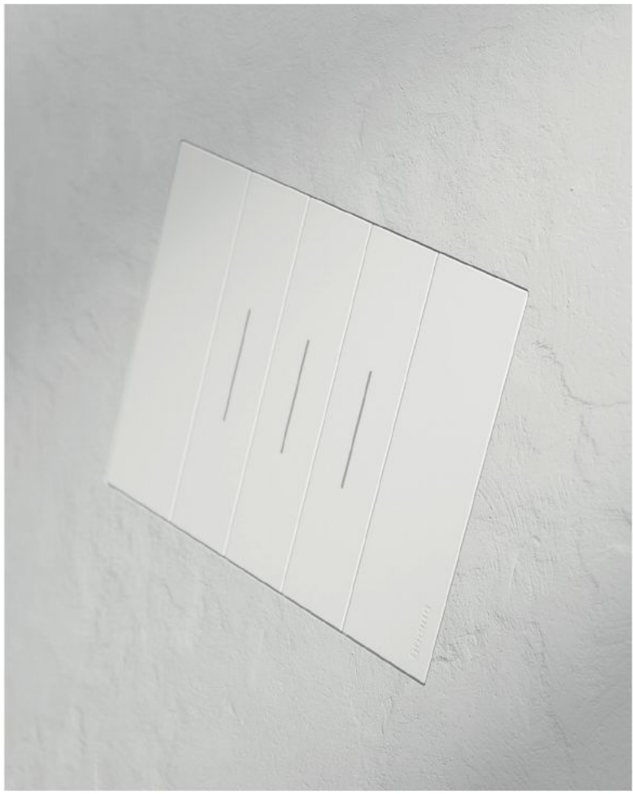

With InWALL, technology becomes discreet: the control device blends into the wall and leaves room for the style of the home. No protrusions, no unnecessary interruptions: just an essential and precise detail, in harmony with its surroundings.

Achieving such a clean result requires dedicated accessories, designed for flush-to-wall mounting, in line with Living Now finishes and control devices.

Your installer can implement this both in new builds and major renovations. The result: tidier spaces and a detail that instantly adds value to your home.

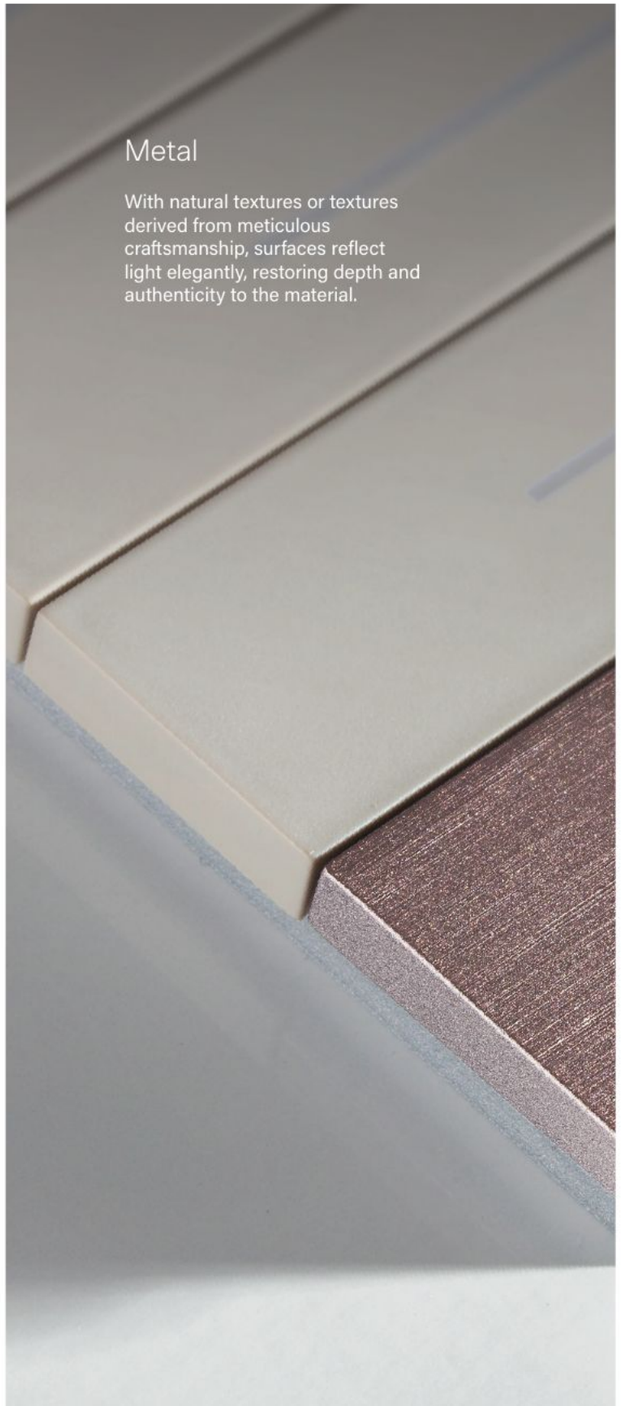

The character of materials

Refined textures and materials enrich the Living Now collection, creating sophisticated combinations that enhance any space, from residential to commercial, from hotels to retail shops.

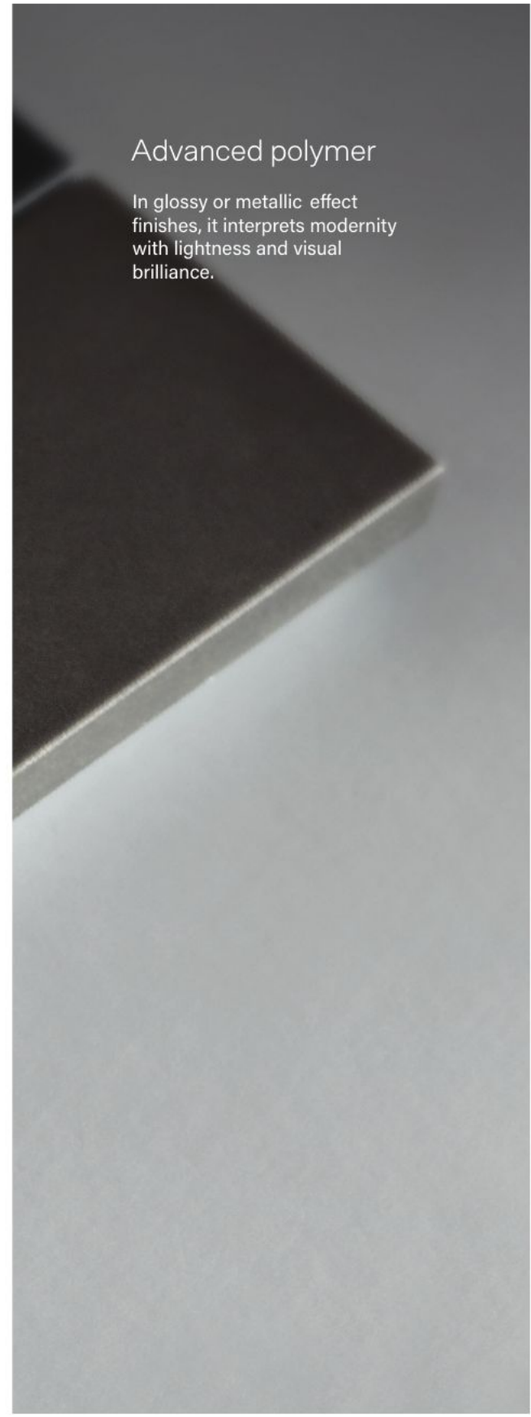

Metal

With natural textures or textures derived from meticulous craftsmanship, surfaces reflect light elegantly, restoring depth and authenticity to the material.

Wood

In oak and walnut finishes, they introduce warmth and natural appeal, making each space more inviting and tactile.

Advanced polymer

In glossy or metallic effect finishes, it interprets modernity with lightness and visual brilliance.

Bold Essence

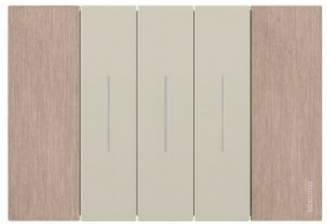

Control devices become stand-out design features: dark and metallic tones alternate with sophisticated nuances, creating spaces that express personality and style with character and confidence.

Brushed Steel
Bold contrast, contemporary reflection

Night
Deep tones, understated elegance

Copper
Vibrant warmth, authentic character

Gold
Warm, refined and sophisticated light

Black
Striking graphics, pure intensity

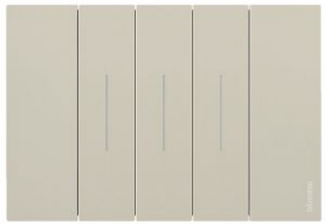

Soft Balance

Ice
Luminous clarity, natural balance

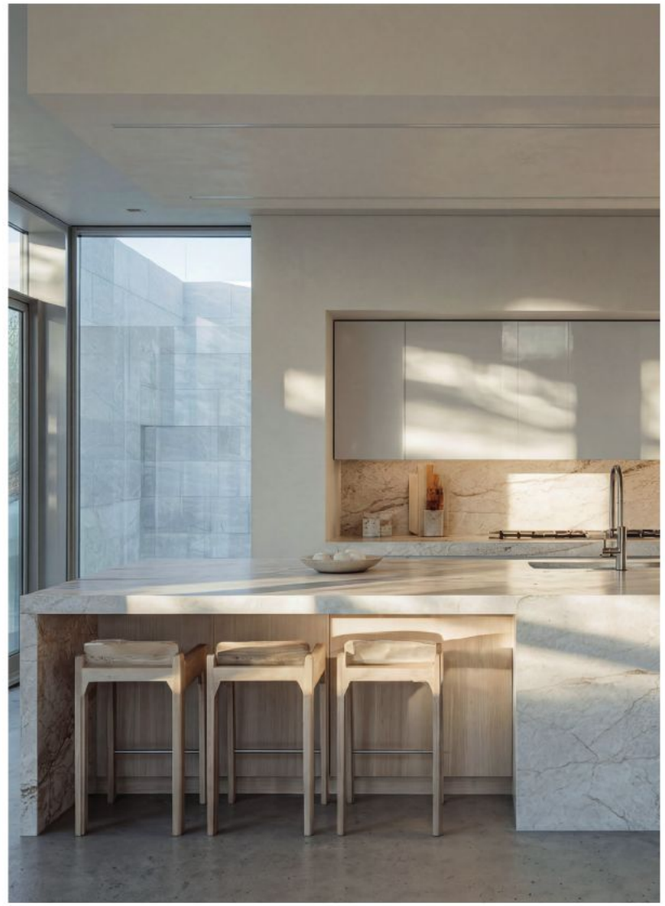

White
Pure light, calm and lightness

Sand
Textural calm, natural elegance

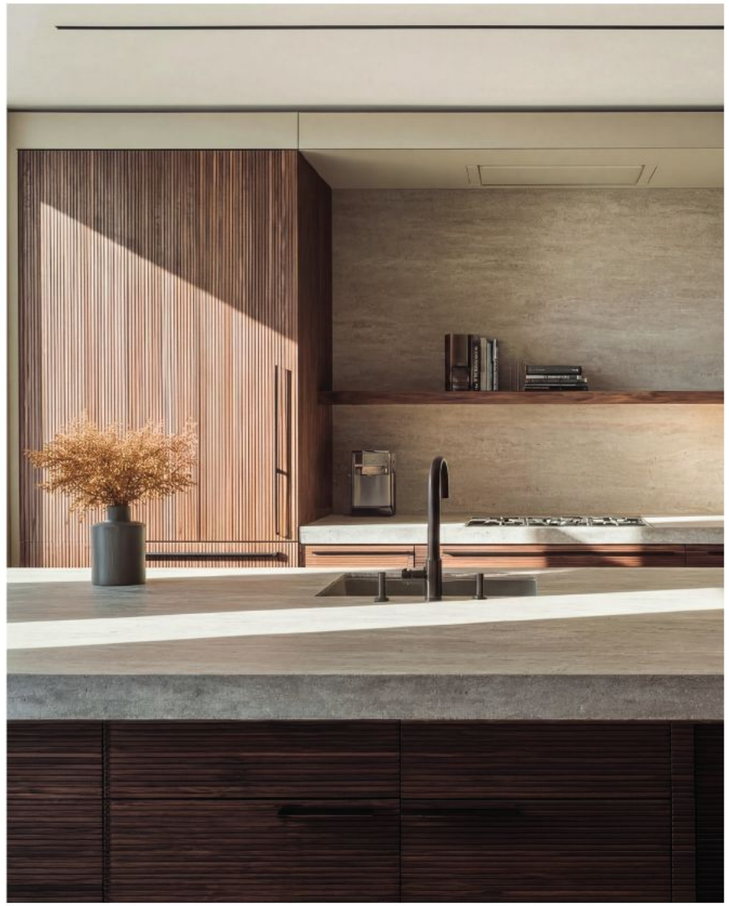

Light and harmonious atmospheres where light and materials blend seamlessly with subtlety. The essential design enhances spaces without overwhelming them, creating a delicate dialogue between function and elegance.

Refined Contrast

Design becomes an expression of creativity and authenticity: textured surfaces and original details transform control devices into unique and defining elements.

Moon
Sophisticated neutrality, measured contrast

Walnut
Textural warmth, contemporary depth

Space
Graphic intensity, modern rigour

Oak
Warm tones, natural harmony

Precious Surfaces

Steel
Contemporary reflections

Bronze
Ancient appeal

Champagne
Warm luminosity

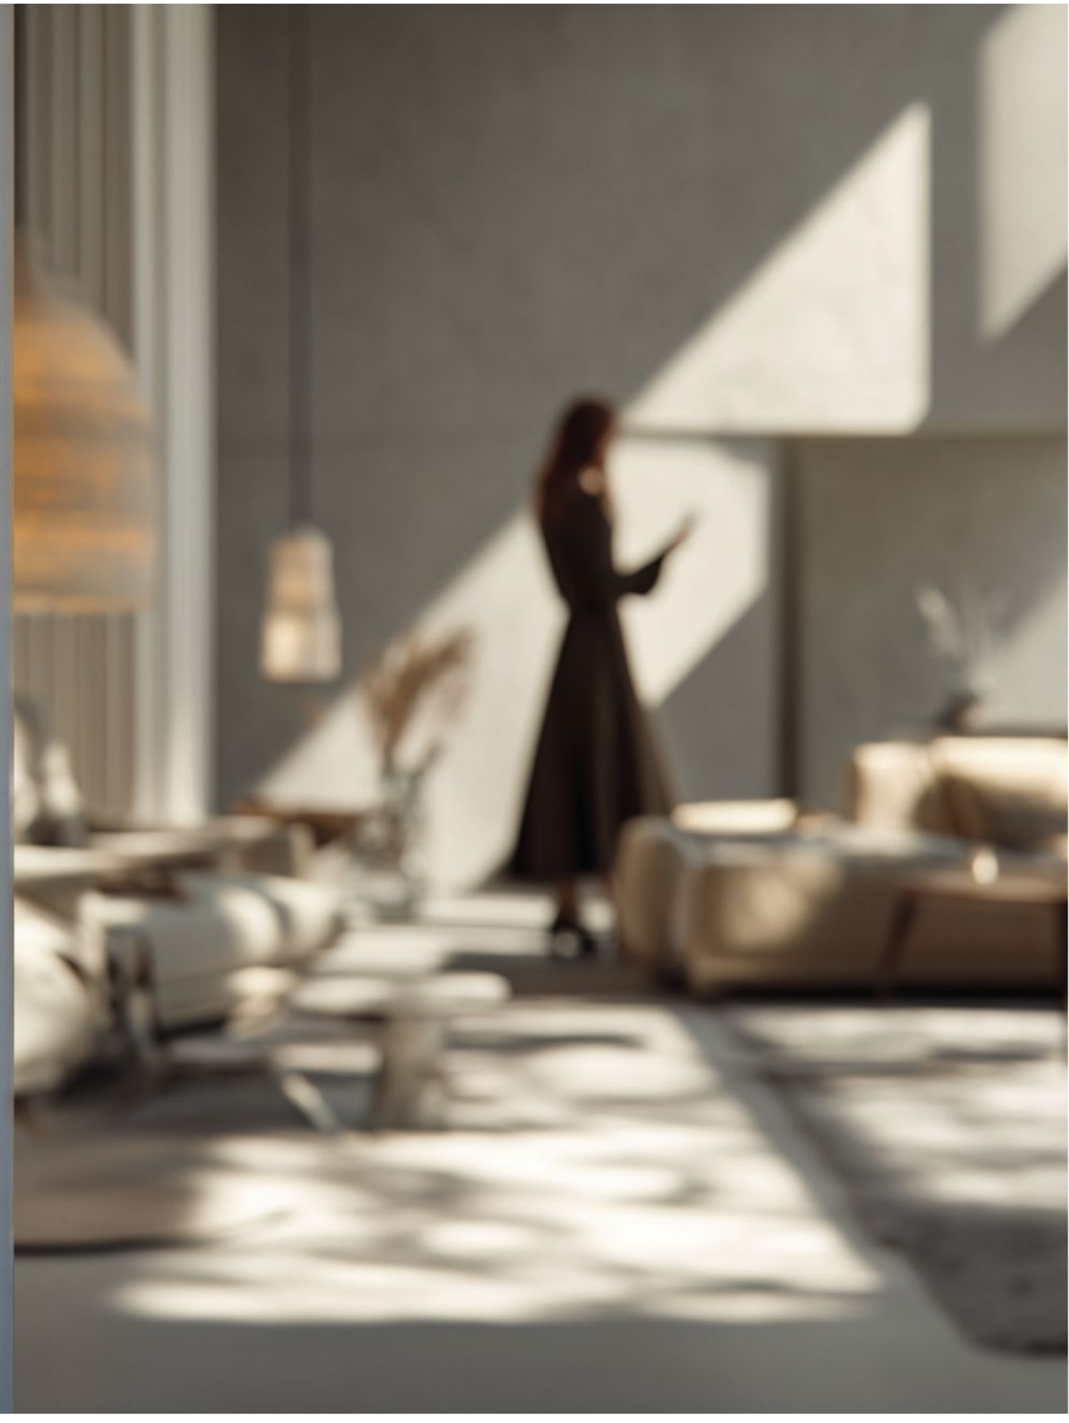

Sophisticated and contemporary atmospheres, where reflections and materials interact with architecture. Metallic finishes enhance spaces with understated elegance, creating depth, light and character.

Smart home, just the way you want it

With Living Now, the smart home becomes part of everyday living in a simple and natural way. Lights, shutters and scenarios adapt to your habits and make every gesture more immediate, from morning to evening. The benefits are tangible: more comfort, greater control and fewer unnecessary steps. And the technology remains discreet, seamlessly integrated into the style of your home.

Living the space

Scenes and functions shape themselves around your actions, adapting to the rhythm of the day. Technology becomes a discreet ally, creating personalised atmospheres and a level of comfort that evolves with the space.

Lights

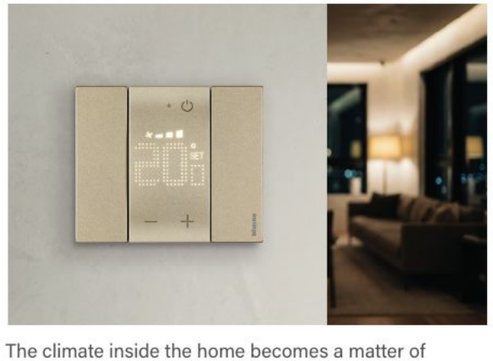

Every light shapes the space. With the Home + Control app and the dedicated controls, you can manage all sources, while the DALI dimmer allows you to adjust intensity, colour and transitions, creating the perfect atmosphere.

Curtains and Shutters

Movement becomes intuitive. You can manage blinds and shutters using the physical control device, voice commands or the Home + Control app, choosing the simplest and most immediate option each time.

Temperature

The climate inside the home becomes a matter of everyday precision: set, monitor and adjust the temperature in every room, creating consistent and fully personalised comfort.

Scenarios

The home responds naturally: a single gesture is enough to control lights, shutters and settings, creating spaces that follow your rhythm and enhance every moment.

Home control, everywhere

Multifunctional controls, touchscreen interfaces, a dedicated app and voice control work together to provide a smooth and intuitive smart experience.
Each function is designed to simplify everyday gestures and make your home even more in tune with your lifestyle.

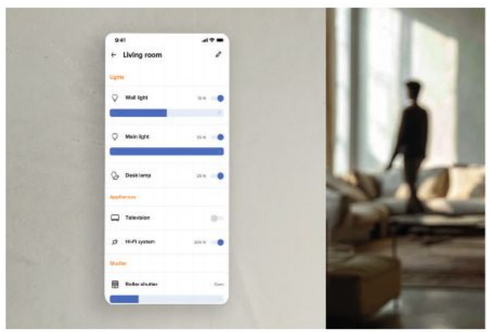

More functions in a single control device

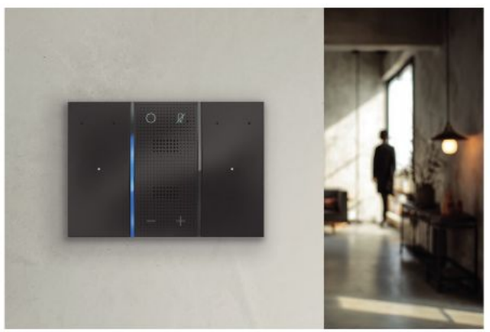

Each control device performs multiple functions, allowing immediate, elegant interaction that is perfectly integrated into the environment.

Comprehensive management, everywhere

With the Home + Control app, you can manage your home at any time: lights, shutters, scenarios and consumptions are always at your fingertips, wherever you are.

Control your home with your voice

Speak and your system will answer. You can control all functions from a smartphone, with the innovative built-in Alexa voice control, or your preferred voice assistant: Siri, Alexa or Google.

Expand or modify the system whenever you wish

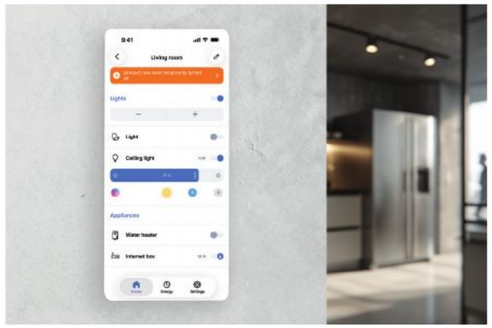

Wireless devices that are easy to install and reposition anywhere ensure flexibility of use and visual consistency in every space.

Energy Saving

Smart devices monitor the space and activate automatic scenarios that improve safety, comfort and efficiency. With the Home + Control app, you can view the status of your home in real time and manage consumptions more consciously.

Active load control

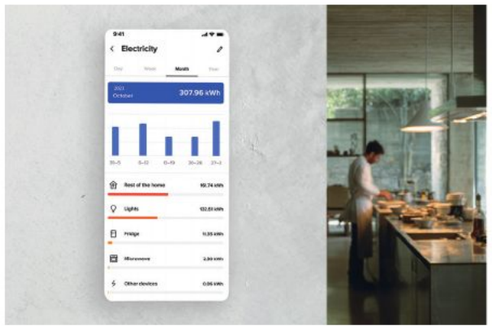

Keep track of the status of energy-consuming devices: receive alerts in case of disconnection, avoid blackouts and restore loads with a simple command.

Sensors for comfort, energy saving and safety

Smart sensors monitor temperature, humidity, brightness, openings and water leaks, triggering fully customisable automatic scenarios via the Home + Control app.

Monitoring of consumptions

With the Home + Control app, HOMETOUCH and the Classe 300 EOS internal unit's home automation menu, you can view consumptions in detail, analyse energy trends and refine daily habits, improving the efficiency of the entire building.

From your idea to the most suitable solution

Every home has different needs, and a smart home truly works when it is designed around how you live. That's why the best approach is to start from your habits: what you want to control, in which spaces and with what level of comfort, defining everything together with your installer. They will advise you on the most suitable technical solution based on the project, the system and its potential for future development.

with Netatmo

Getting started in a smart and easy way
Ideal if you want an easy to-use connected home, with app control and smart features for everyday life. A practical and versatile solution, suitable for both new installations and many renovations.

MyHOME

For more advanced home management
Designed for those who want to integrate more functions and build a more complete and customised smart home. It offers broader system control and great flexibility in managing spaces.

KNX

For advanced projects and professional integration
The most comprehensive choice for complex projects, where multiple systems and functions need to be integrated at an advanced level. Ideal when the smart home is part of a larger system project.
